

Answer Key

Makeup Examination

Whole course · 25 questions × 4 points = 100 points

Answer string: B B B D B B C B C A B A B C B B C B C B B D B C B

1. **B** Next-token prediction, repeated. Nothing is retrieved and no rules are applied.
2. **B** The same operation runs regardless of pattern strength, and confidence is not part of what is produced.
3. **B** It answers from the earlier version or something adjacent, without flagging the cut-off.
4. **D** Accepting a false premise follows from predicting a likely continuation, not from tokenisation. The other three are direct tokenisation consequences.
5. **B** Silent truncation with a confident answer. An explicit error would be the preferable case.
6. **B** Safety fine-tuning shifts probabilities. It produces a tendency, not a gate — which is why framing can defeat it.
7. **C** Wrong reader or wrong country is a Context failure.
8. **B** The fallback principle: make the honest answer probable rather than appealing to honesty.
9. **C** Omission — true throughout, missing what mattered.
10. **A** Displacement — accurate elsewhere, inapplicable here.
11. **B** Retrieved the wrong passage: a genuine quotation from an unrelated place.
12. **A** Over-reading: an exception reported as a general rule.
13. **B** Silent failure.
14. **C** Verification requires something outside the system. The other three stay inside it.
15. **B** Correct only for the cases tried — untested paths were generated but never run.
16. **B** Consistency resembles reliability. Intermittent failure attracts attention; steady error does not.
17. **C** $0.95^5 \approx 0.77$.
18. **B** Completion is a judgment about matching an intention that is not present in the context, so it is predicted like anything else.
19. **C** Sending is irreversible and no human precedes it.
20. **B** Repetitive, document-backed, recoverable. Difficulty is not a virtue here.
21. **B** It commits to nothing and changes no design decision. A named person does.
22. **D** A Domain Pack does nothing for truth.

- 23. **B** Instructions and data share one undifferentiated channel, with no reliable trust label.
- 24. **C** Causing an action requires connected tools; the others need only text.
- 25. **B** Rare combinations of ordinary details identify people in small populations.

Marking. 4 points per question, 100 points total. No negative marking.
