

# Answer Key

## Quiz 3

Weeks 5–6: Style, Tone and Format; Building Without Code

---

1. **B** “Professional” is compatible with a lawyer’s register, a nurse’s and a consultant’s — all different documents. The instruction does not narrow the distribution much, so the output is averaged and varies between runs.
2. **B** Field is subject vocabulary; tenor is the relationship and social distance; mode is the channel. “You must submit” and “would it be possible” differ in tenor.
3. **C** An adjective labels a feeling; a behaviour is something the text does, and can be checked against the output.
4. **C** Empty cells are unlikely continuations — tables in training data are mostly full — so something plausible fills the gap.
5. **B** The fallback principle: you are not appealing to honesty, you are making the honest answer the probable one by giving it a fixed, likely form.
6. **C** Negative constraints work when they are specific and countable. “Do not be boring” is a complaint, not a constraint.
7. **B** Next-token prediction where the tokens happen to be code. Everything from Week 3 applies, including that nothing checks correctness.
8. **B** Code is highly patterned, abundantly available, and common tasks recur almost identically. The corollary: unusual requirements sit on thin ground, delivered with identical confidence.
9. **C** Wrong logic with right appearance. Note that being wrong *consistently* makes it look more reliable, not less — a randomly failing tool would be caught.
10. **B** The verification gap. The surface is not evidence, and with generated code your usual defence — reading the output — is unavailable.
