

Week 5 Quiz: Controlling Style, Tone, and Format

Prompt Engineering Course

Name: _____

Date: _____

Instructions: Answer all questions by circling the best answer for each multiple choice question.

1. What are the three dimensions of linguistic register?
 - A. Formal, casual, neutral
 - B. Field, tenor, mode
 - C. Syntax, lexicon, rhythm
 - D. Voice, tone, style
2. Which of the following best describes “tenor” in linguistic register?
 - A. The technical complexity of vocabulary used
 - B. The relationship and power distance between communicators
 - C. Whether communication is spoken or written
 - D. The average sentence length in a document
3. In Brand Voice Fingerprinting, what does “syntax signature” measure?
 - A. Preferred vocabulary choices
 - B. Sentence length, clause complexity, and passive voice percentage
 - C. The rhythm and pacing of writing
 - D. The point of view used in writing
4. Why should you provide both a strong sample AND a counter-example when doing Voice and Tone Diagnostics?
 - A. To confuse the AI model
 - B. AI learns boundaries better from contrasts than from positive examples alone
 - C. Counter-examples are required by law
 - D. To make the prompt longer and more detailed
5. What is a “structural contract” in prompt engineering?
 - A. A legal agreement between you and the AI provider
 - B. A specification that defines exactly how output should be formatted for downstream processing

- C. A contract stating how many prompts you can use
 - D. A formal tone requirement
6. Which prompt instruction would create a more “urgent” tone?
- A. “Use passive voice and hedge words”
 - B. “Write in third person with long, complex sentences”
 - C. “Use short sentences, action verbs, and explicit deadlines”
 - D. “Avoid all time references”
7. In multi-stakeholder voice reconciliation, what is the recommended approach when different departments have conflicting voice requirements?
- A. Choose the CEO’s preference
 - B. Use layered prompts with priority matrices
 - C. Ignore the conflicts
 - D. Average all requirements together
8. What is the purpose of programmatic tone testing?
- A. To manually review every AI output
 - B. To automatically validate tone consistency using metrics like sentiment analysis and readability scores
 - C. To test if the AI is connected to the internet
 - D. To count the number of words in output
9. Which statement about multi-dimensional register specifications is TRUE?
- A. “Be professional” is just as precise as “CEFR B1 + peer tenor + written-planned mode”
 - B. Multi-dimensional specs are too complicated to be useful
 - C. Multi-dimensional specs provide precise, reproducible style control
 - D. Vague instructions always work better than detailed specifications
10. What does “mode” control in linguistic register?
- A. The relationship between communicators
 - B. Technical vocabulary density
 - C. Whether communication is spoken/written and planned/spontaneous
 - D. The emotional tone of the message
