AI Tool Used: GPT-5 for all tasks

Part 1

a. Domain & Task Description

- Domain: Marketing
- Task: Develop a marketing campaign for a new product

b. Version A: Vague Prompt

- Vague prompt:
Help me come up with an idea for a new smartwatch promotion campaign.
- Screenshot: [Part 1: Vague Prompt \(external link\)](#)

c. Version B: Improved Prompt

- Improved prompt:
You are a creative marketing strategist with 10 years of experience in product promotion.
Help me generate a unique promotion campaign idea for a new smartwatch, including a catchy tagline and the main marketing channel.
Use a step-by-step reasoning process to explain why each idea could succeed.
Format your response as a table with columns: Idea, Tagline, Channel and Reasoning.
- Role prompting, chain of thought and structured output.
- Screenshot: [Part 1: Improved Prompt \(external link\)](#)

d. Comparison Analysis

- Version A:
More idea oriented than execution oriented.
Requires significant work.
Ideas stay conceptual.
- Version B:
More structured and professional.
Immediately usable.
Provides concrete structures.
- Added a structured table format
Provided reasoning
Specifies marketing channels
- I specified the role and structure, and asked for step by step reasoning.

Part 2

a. Framework Selection & Justification

- I used the CO-STAR framework and the second business task.
- The CO-STAR framework is great for this task because it tells the AI exactly what it needs to know, what to create, how it should sound, who it's for, and what the final result should look like.

b. Complete Prompt Following Framework Structure

- Prompt:
Context: You are a social media strategist helping a small business owner plan their online content.
Objective: Create a one-month social media content calendar with daily post ideas and details.
Style: Use clear and creative language.
Tone: Friendly, supportive, and professional.
Audience: A small business owner who needs creative content guidance.
Response: A monthly summary followed by a 30 day table including platforms, post type, topic, caption idea and asset needed.

c. AI Output

- Screenshot: [Part 2: Prompt \(external link\)](#)
- It assumed the role.
It understood the objective.
The style and tone were as mentioned.
The response was exactly as asked.

d. Refinement & Iteration

- Monthly summary is vague.
Table doesn't give details about each post.
- Refined prompt:
Context: You are a social media strategist helping a small business owner plan their online content.
Objective: Create a one-month social media content calendar with daily post ideas and details.
Style: Use clear and creative language.
Tone: Friendly, supportive, and professional.
Audience: A small business owner who needs creative content guidance.
Response: A day by day monthly summary followed by a 30 day table including platforms, post type, topic, caption idea, asset needed and detailed description.
- Screenshot: [Part 2: Refined Prompt \(external link\)](#)
- I asked it to make the monthly summary day by day and include a detailed description in the table for each day's post.

e. Framework Effectiveness Reflection

- I got the exact results I wanted thanks to the framework.
- I wouldn't use a different framework for this task because CO-STAR suits my needs perfectly.
- Framework selection can have a big difference in the output because it sets boundaries for the AI.

Part 3

a. Skill Progression

- I got an overall idea of how AI's work.
- That moment for me was learning how hallucination happens.
- Detailing the concept I wanted was the hardest part.

b. Practical Application

- It can easily be applied to game development.
- I would use all the frameworks depending on the situation because each is good at a different area.
- Explaining the game to the AI could be hard. I would use images or videos for that.

c. Limitations & Ethics

- Limitation 1: Hallucinations
Limitation 2: AIs not understanding but rather predicting
- Output may be biased by training data.
- Being clear about boundaries and verifying outputs.

d. Goals for the Second Half

- Role assignment and persona design
- Workflow design
