

Prompt Engineering Quiz: Week 3 & 4

Ankara Medipol University

October 31, 2025

Instructions

Please choose the best answer for each of the following questions.

1. Which component of a good prompt specifies the persona the AI should adopt and the target reader?
 - (a) Output Spec
 - (b) Context
 - (c) Role/Audience
 - (d) Constraints
2. When you provide 1-3 high-quality examples of the desired output format in your prompt, what pattern are you using?
 - (a) Zero-shot prompting
 - (b) Few-shot prompting
 - (c) Role prompting
 - (d) Reflection prompting
3. What is the primary purpose of Retrieval-Augmented Generation (RAG)?
 - (a) To make the model's responses more creative and imaginative.
 - (b) To ground the model's answers in provided, specific context.
 - (c) To translate the model's output into different languages.
 - (d) To have the model critique its own work before finalizing an answer.
4. The instruction "Let's think step by step" is a common way to trigger which reasoning technique, especially when no examples are provided?
 - (a) Tree-of-Thoughts (ToT)
 - (b) Zero-shot Chain-of-Thought (CoT)
 - (c) Self-consistency
 - (d) Plan-then-solve
5. Why are delimiters like triple backticks (```) important in a prompt?
 - (a) They make the prompt run faster.
 - (b) They are required for all prompts to work.
 - (c) They clearly separate instructions from data or context, reducing ambiguity.
 - (d) They automatically format the output as a code block.
6. Asking the model to "be brief" and "include all details" in the same prompt is an example of which anti-pattern?
 - (a) Overloaded ask

- (b) Vague audience
 - (c) Hidden constraints
 - (d) Conflicting directives
7. Which framework is adapted from project management and uses the components: Context, Objective, Style, Tone, Audience, and Response?
- (a) SMART
 - (b) RACI
 - (c) IDEA
 - (d) CO-STAR
8. What is the main difference between a prompt pattern and a prompt framework?
- (a) Patterns are for simple tasks, while frameworks are only for complex AI.
 - (b) Frameworks package multiple patterns into a reusable, structured template for a workflow.
 - (c) Patterns define the output format, while frameworks define the input data.
 - (d) There is no difference; the terms are interchangeable.
9. The process of using an LLM to generate, critique, or refine another prompt is known as:
- (a) Prompt Chaining
 - (b) Meta-Prompting
 - (c) Dynamic Few-Shot Selection
 - (d) Pattern Stacking
10. In the context of LLMs, what does "Tool Use" or "Function Calling" allow the model to do?
- (a) Execute Python code directly within the model's environment.
 - (b) Browse the internet without any restrictions.
 - (c) Generate a structured JSON object specifying a function to be called and its arguments.
 - (d) Automatically debug and fix errors in its own code.
11. A comprehensive organizational asset that details a complete, multi-step workflow with prompts, human review steps, and guardrails is best described as a:
- (a) Prompt Pattern
 - (b) Prompt Framework
 - (c) Prompt Playbook
 - (d) Prompt Template
12. The IDEA Loop is a framework for continuous improvement. What does the "A" in IDEA stand for?
- (a) Analyze
 - (b) Adjust
 - (c) Audience
 - (d) Action
